Disclaimer

This presentation has been prepared by Orkla ASA (the "Company") solely for information purposes. The presentation does not constitute an invitation or offer to acquire, purchase or subscribe for securities.

Certain statements included in this presentation contain various forward-looking statements that reflect management's current views with respect to future events and financial and operational performance. The words "believe," "expect," "anticipate," "intend," "may," "plan," "estimate," "should," "could," "aim," "target," "might," or, in each case, their negative, or similar expressions identify certain of these forward-looking statements. Others can be identified from the context in which the statements are made. Although we believe that the expectations reflected in such forward-looking statements are reasonable, these forward-looking statements are based on a number of assumptions and forecasts that, by their nature, involve risk and uncertainty. Various factors could cause our actual results to differ materially from those projected in a forward-looking statement or affect the extent to which a particular projection is realized. Factors that could cause these differences include but are not limited to the Company's ability to operate profitably, maintain its competitive position, to promote and improve its reputation and the awareness of the brands in its portfolio, to successfully operate its growth strategy and the impact of changes in pricing policies, political and regulatory developments in the markets in which the Company operates, and other risks.

The information and opinions contained in this document are provided as at the date of this presentation and are subject to change without notice.

No representation or warranty (expressed or implied) is made as to, and no reliance should be placed on, the fairness, accuracy or completeness of the information contained herein. Accordingly, neither the Company nor its subsidiary undertakings or any of such person's officers or employees accepts any liability whatsoever arising directly or indirectly from the use of this document.

Alternative Performance Measures (APM)

Contribution ratio
Contribution margin ratio is calculated by dividing the contribution margin by operating revenues. Operating revenues minus variable operating expenses constitute the contribution margin. Variable operating expenses are reported on the financial statement line “operating expenses” and consist of expenses directly related to sales volume. Variable expenses include costs related to input factors such as raw materials and packaging, and variable production costs such as electricity related to production and variable pay. They also include ingoing and outgoing freight costs directly related to sales volume. Costs related to finished goods purchased for resale are included as part of variable operating expenses. Production costs that are relatively constant over time and do not vary according to production volume are not included in the computation of contribution margin; such costs include warehouse costs, payroll expenses linked to factory administration and management staff, and depreciation of production equipment. Contribution margin is a key internal financial figure that illustrates how profitable each portfolio company’s product mix is, and hence also the company’s ability to cover fixed expenses.

Contribution margin is an important financial figure with regard to product innovation and product portfolio optimisation.

Organic growth
Organic growth shows like-for-like turnover growth for the group’s business portfolio and is defined as the group’s reported change in operating revenues adjusted for effects of the purchase and sale of companies, the re-conclusion and loss of distribution agreements of a material nature, and currency effects. Intra-group transfers of companies and changes in distribution agreements between portfolio companies are also taken into account. In calculating organic growth, acquired companies are excluded 12 months after the transaction date. Sold companies are excluded pro forma 12 months prior to the transaction date. Currency effects are neutralised by translating this year’s turnover at last year’s exchange rates.

Organic growth is included in segment information, and is used to identify and analyse the turnover growth of the consolidated portfolio companies. Organic growth provides an important picture of the portfolio companies’ ability to carry out innovation, product development, correct pricing and brand-building.

Segment information for each consolidated portfolio company shows how large a part of organic growth is related to price effects and how large a part is linked to volume/mix effects. Price effects are defined as net changes in prices to customers, i.e. changes in customer prices adjusted for factors such as discounts, campaigns and price reductions. The price effects are calculated based on the assumption of unchanged volume. Volume/mix effects are calculated as a residual, and comprise organic growth minus price effects. Volume/mix effects consist of changes in sales volume and/or changes in the product mix sold.

EBIT (adj.)
EBIT (adj.) shows the group’s current operating profit before items that require special explanation, and is defined as reported operating profit or loss before “Other income and expenses” (OIE). These include M&A costs, restructuring or integration expenses, any major gains on and write-downs of both tangible and intangible assets, and other items that only to a limited degree are reliable measures of the group’s current profitability. EBIT (adj.) margin and growth are derived figures calculated in relation to operating revenues.

EBIT (adj.) is one of the group’s most important financial figures, internally and externally. The figure is used to identify and analyse the group’s profitability linked to normal operations and operating activities. Adjustment for items in OIE which to a limited degree are reliable measures of the group’s current operating profit or loss increases the comparability of profitability over time.

Alternative Performance Measures (APM)

Change in underlying EBIT (adj.)
Change in underlying EBIT (adj.) shows like-for-like EBIT (adj.) growth for the group's business portfolio, and is defined as the group's reported change in EBIT (adj.), adjusted for effects of the purchase and sale of companies, the re-conclusion and loss of distribution agreements of a material nature, and currency effects. Account is also taken of intra-group transfers of companies and changes in distribution agreements between portfolio companies.

In calculating the change in underlying EBIT (adj.), acquired companies are included pro forma 12 months prior to the transaction date. Sold companies are excluded pro forma 12 months prior to the transaction date. Currency effects are neutralised by translating this year's EBIT (adj.) at last year's currency exchange rates. Where underlying profit performance is mentioned in the report, reference is made to underlying EBIT (adj.) performance. Underlying EBIT (adj.) margin and change therein are derived figures calculated in relation to operating revenues.

Underlying EBIT (adj.) growth is used for internal management purposes, including for identifying and analysing underlying profitability growth in the existing business portfolio, and provides a picture of the portfolio companies' ability to improve profitability in their existing operations. The measure is important because it provides a comparable structure for monitoring the change in profitability over time.

Return on Capital Employed (ROCE)
ROCE is calculated by dividing a 12-month rolling EBITA (adj.) by the average capital employed in the consolidated portfolio companies.

EBITA (adj.) consists of EBIT (adj.) plus depreciation and write-downs of intangible assets. 12-month rolling EBITA (adj.) is used in the calculation. Since depreciation and write-downs of intangible assets are not included in EBITA (adj.), they are also excluded from the capital base. Thus the historical cost of intangible assets is used in capital employed (see next paragraph).

Capital employed represents the working capital of the consolidated portfolio companies and consists of:

- Net working capital - consists of the statement of financial position items "Trade receivables", "Trade payables" and "Inventories". It also includes payable public charges and some minor receivables and payables related to operations included in "Other receivables and financial assets" and "Other current liabilities".
- Fixed assets
- Intangible assets at historical cost - consist of the statement of financial position line "Intangible assets" plus accumulated depreciation and write-downs
- Net pension liabilities -Pension assets are included in the statement of financial position line "Associates, joint ventures and other financial assets", while pension liabilities are included in "Provisions and other non-current liabilities"
- Deferred tax on excess value - This item is included in deferred tax which is part of the statement of financial position line "Provisions and other non-current liabilities"

Alternative Performance Measures (APM)

Return on Capital Employed (ROCE) cont.
Average capital employed is always an average of the closing balances in the five last reported quarters.

ROCE shows the return that the Orkla group receives on the capital invested in the various consolidated portfolio companies. This is an important measurement parameter for assessing whether the portfolio companies' return exceeds the group's weighted average cost of capital (WACC), and for comparing the return on the current portfolio with other alternative returns.

Earnings per share (adj.)
Earnings per share (adj.) show earnings per share adjusted for discontinued operations and "Other income and expenses" after tax and non-controlling interests. Adjustments are also made for any reported gains or losses on sales/purchases of associates and joint ventures, as well as for any reported major profit or loss effects linked to abnormal tax conditions.

Net replacement and expansion investments
When making investment decisions, the group distinguishes between replacement and expansion investments. Expansion investments are the proportion of overall reported investments deemed to be investments in either new geographical markets or new categories, or investments which represent significant increases in capacity. Net replacement investments include new leases and are reduced by the value of sold fixed assets valued at sale value.

The purpose of this distinction is to show how large a part of the investments (replacement) mainly concerns maintenance of existing operations and how large a part of the investments (expansion) are expected to generate increased contributions to profit in future, over and above profit expectations linked to normal operations.

Cash conversion
Cash conversion is calculated as cash flow from operations as a percentage of EBIT (adj.). Cash flow from operations is defined and presented in the Orkla-format cash flow statement.

Cash conversion is an important key figure for Orkla, as it shows how much of EBIT (adj.) has been converted into net interest-bearing liabilities, and thus the financial means available to the group. Net interest-bearing liabilities are the group's most important management parameter for financing and capital allocation.

Alternative Performance Measures (APM)

Net interest-bearing liabilities

Net interest-bearing liabilities are the sum of the group's interest-bearing liabilities and interest-bearing receivables. Interest-bearing liabilities include bonded loans, bank loans, other loans, lease liabilities and interest-bearing derivatives. Interest-bearing receivables include cash and cash equivalents, interest-bearing derivatives and other interest-bearing receivables.

Net interest-bearing liabilities are the group's primary management parameter for financing and capital allocation, and are actively employed as part of the group's financial risk management strategy. The Orkla format cash flow statement therefore shows the change in net interest-bearing liabilities at group level.

Structure (acquisitions and disposals)

Structural growth includes adjustments for Orkla Food Ingredients' acquisitions of Eurohansa Toruń, Le Vesuve, Decorgel, Vortella, Senna, Phoenix Brands and Premier Chocolate, Orkla Snacks' acquisition of The European Candy group and a smaller acquisition of a customer list for almond paste production. Adjustments have been made for the divestments of Pierre Robert Group, Nói Síríus, Eisunion, Kjarnavörur, Gædabakstur and the Poltsaama factory (with associated brands in Foods Eesti). There are also adjustments for the discontinuation of a distribution agreement between PepsiCo and Orkla Foods related to the Quaker brand, and for the transfer of a smaller distribution agreement in Denmark from Orkla Foods to Orkla Food Ingredients (net zero effect at group level).

In 2025, adjustments were made for the acquisitions of the businesses Freunde der Erfrischung, Snackfood and Kartonage. Adjustments were also made for the divestments of Lilleborg and Fruta Podivín.

Orkla
